Fullstack Developer Challenge 2

This is an interview challenge (expected duration: **2–3 days**)

Requirements

- Design a web application that allows employees to submit feedback toward each other's performance review.
- Partial solutions are acceptable.
- It is not necessary to submit a complete solution that implements every requirement.
- A running code is a must.

Admin view

- Add/remove/update/view employees
- Add/update/view performance reviews
- Assign employees to participate in another employee's performance review

Employee view

- List of performance reviews requiring feedback
- Submit feedback

Challenge Scope

- High level description of design and technologies used
- Server side API (using a programming language and/or framework of your choice)
- Implementation of at least 3 API calls
- Implementation of 2-5 web pages using a modern Single page web framework (e.g. Vue.js or React.js) that talks to server side via REST APIs
- This should integrate with your API, but static responses are acceptable.
- Document any assumptions made.
- Complete solutions aren't required, but what you submit needs to run successfully.

How to complete this challenge

- Complete the design and code to the best of your abilities.
- Add notes or comments where useful for clarity.
- Submit your solution (zip file or GitHub repo, or online IDE) with setup instructions.
- Ensure simple steps for the team to run the project locally

What we're looking for

- How you reason with limited requirements
- Technology and design decisions
- Code readability
- Clarity in assumptions

Note that the use of AI tools is strictly discouraged, as this test is to understand your thought process and problem solving capabilities. So, keep it all old school, manual, hand-crafted piece of web art.
